

**COMPLETE LISTING OF CLAIMS**

**IN ASCENDING ORDER WITH STATUS INDICATOR**

1 (Currently amended) In a method of hormone replacement therapy ~~in a host by comprising~~ administering an effective amount of a selective estrogen receptor modulator to ~~the host~~ a woman in need of such therapy in order to control and regulate estrogenic impact on specific tissues and organs, the improvement which comprises additionally administering an agent which exhibits progestogenic activity ~~to in the host~~ woman in an amount which is effective to modulate the side effects of the selective estrogen receptor modulator.

2(Original). The method of claim 1 wherein the selective estrogen receptor modulator is clomiphene.

3(Original). The method of claim 1 wherein the selective estrogen receptor modulator is a benzothiophene.

4(Previously amended). The method of claim 1 wherein the agent which exhibits progestogenic is an antiprogestin.

5(Original). The method of claim 4 wherein the antiprogestin is a progesterone receptor antagonist.

6(Original). The method of claim 5 wherein the selective estrogen receptor modulator is clomiphene.

7(Original). The method of claim 5 wherein the selective estrogen receptor modulator is a benzothiophene.

8(Original). The method of claim 4 wherein the amount of antiprogesterone is that sufficient to maintain the blood estrogen concentration in the range of about 25 to 125 pg/ml.

 9(Original). The method of claim 8 wherein the amount of antiprogesterone is that sufficient to maintain the blood estrogen concentration in the range of about 60 to 90 pg/ml.

10(Previously amended). The method of claim 1 wherein the agent which exhibits progestogenic expresses both androgenic and progestogenic activity.

11(Previously amended). The method of claim 10 wherein the agent which exhibits progestogenic comprises the combination of an androgen and a progestin.

12(Previously amended). The method of claim 10 wherein the agent which exhibits progestogenic is a single material which expresses both activities.

13(Previously amended). The method of claim 12 wherein the agent which exhibits progestogenic is danazol or levonorgestrel.

14(Previously amended). A kit comprising a plurality of tablets containing an amount of a selective estrogen receptor modulator effective for hormone replacement therapy and an agent which exhibits progestogenic activity in an amount effective to modulate the side effects of the selective estrogen receptor modulator.

15(Original). The kit of claim 14 wherein the selective estrogen receptor modulator is clomiphene or a benzothiophene.

16(Previously amended). The kit of claim 14 wherein the agent which exhibits progestogenic is an antiprogestin.

17(Original). The kit of claim 16 wherein the antiprogestin is a progesterone receptor antagonist.

18(Original). The kit of claim 14 wherein the agent expresses both androgenic and progestogenic activity.

19(Original). The kit of claim 18 wherein the agent comprises the combination of an androgen and a progestin.

20(Original). The kit of claim 18 wherein the agent is a single material which expresses both activities.
